

# Project Seminar

Fredrik Lindsten

# Agenda

- **13:15 – 14:00** Presentations by Groups 1, 5, 9 (in that order)
- **14:00 – 15:50** Discussion in small groups
  - We have 1 h 50 min in total => 75-90 min active discussions
  - 5 discussion topics => 15-20 min/topic
  - Decide who takes notes before you start the discussion. Send me an email with your discussion summary before returning to the plenary session. (*Title: Discussion group #*)
- **15:50 – 16:00** Final reflections

# 1. Zero-shot classification

- What is the difference between zero-shot classification and “regular” classification?
- What are the strengths and limitations of zero-shot classification?
- How can prompt engineering (e.g., "this is a satellite image of xx") influence zero-shot classification performance in your project?

## 2. Transfer learning & fine-tuning

- What is the benefit of starting from a pre-trained model?
- What does fine-tuning mean? Which part/parts of the model can be fine-tuned, and what are the possible pros/cons with different options?
- Draw a block diagram or similar that illustrates how the model that you have used in the project works. (*Think about it as a pedagogical illustration, that you could use to explain to some student who has taken the course, but not done the project, what it is that you have done.*)

### 3. Semi-supervised learning

- What is the difference between supervised, unsupervised, and semi-supervised learning?
- What different approaches to semi-supervised learning can you think of (on a conceptual level)? What are the pros and cons of the different approaches?
- Explain the loss function(s) that you have used (or could have used) for the semi-supervised learning task in the project.

## 4. General

- Did you gain any new insights from working on the project? Explain!
- What was the most challenging part of the project? Was it technical, conceptual, or organizational?
- If you had unlimited computing resources and data, what would you do differently in this project?

## 5. Feedback

- What was good about the project?
- How can the project be improved?
- Do you have any other feedback to us related to the project?
